TO: API RP 19B Perforator Registered Organizations  
API RP 19B Perforator Applicants

API has added evaluation of perforators using stressed rock targets (Section II testing) to the globally recognized API 19B Perforator Witness & Registered Design Program. The program for many years has evaluated perforating systems using concrete targets, and organizations successfully completing evaluations have had the option to publish their successful designs in API's Composite List. Now organizations can take advantage of the same option for perforator designs successfully evaluated using stressed rock targets.

If your organization wants its perforator design recognized as one that meets API RP 19B requirements for perforators evaluated using stressed rock targets, consider applying for participation in API's 19B Perforator Witness & Registered Design Program. Program requirements and application information can be found at <https://www.api.org/products-and-services/witnessing-programs/perforators>.

Sincerely,

Kevin Ferrick  
Sr. Director, API Monogram Program /APIQR
