Advisory 9

Recognition and Authority of Published Standards

This Advisory notifies all licensees, registered organizations and applicants of API's ongoing commitment to maintaining product safety and the integrity of its licensing/certification programs in the petroleum and natural gas industry. API requires that design and manufacture of products eligible to bear the API Monogram be based solely on the official* current copy of the applicable specification or standard issued by API Standards development subcommittees and published under the authority of the API.

Before the approval of an initial and/or renewal application for an API Monogram license, the organization must maintain a current official copy of all API documents relative to the application, or proposed scope of the license. Additionally, this shall apply to organizations that want a certificate of registration to API Spec Q1.

The official copy must be also an authorized** copy as verified by having a watermark that contains the organization's name or evidence in the form of an invoice showing that the organization purchased an authorized copy from an API authorized redistributor. The organization shall maintain the authorized, official copy of the current version of the applicable API documents as long as they are actively participating in any API licensing and certification program.

Failure to comply with the above will result in an audit nonconformance, and if not rectified, can lead to the suspension or cancellation of the company's API Monogram License(s), withdrawal of application for license(s) and / or APIQR Certificate(s) of Registration (in the case of Q1 Registration). Authorized copies of API publications can be purchased through the Monogram Web Store.

This advisory supersedes any previous guidance. It is considered part of API's Program Requirements and compliance is required for certification.

*An official copy is the English version of the applicable document purchased through an authorized redistributor.

** An authorized copy is purchased through an API authorized redistributor and may be in the organization's native language, where available, from an API authorized redistributor. However, all audits are based only on the English version of the applicable document.
