

ENERGY IS...

CONNECTICUT

KEEPING THINGS SHIPSHAPE!

HULL: Fiberglass — glass fiber-reinforced plastic, which is derived from petroleum.

SEATING: Spray foam insulation, typically made with polyurethane, a petroleum derivative.

SAILS: Dacron, made from petroleum.

RIGGING: Nylon and polyurethane ropes.

Energy is Everything.

In virtually every human activity and invention, energy plays an important role: powering, building and improving the quality of everyday life.

Boating in Connecticut illustrates this point. From sailboats to powerboats and from stem to stern, materials made from natural gas and oil go into all kinds of watercraft — for strength and durability that keep Americans cruising the seas, rivers and lakes.

QUICK FACTS:

- Connecticut has about **108,000 registered boats**, according to the National Marine Manufacturers Association (NMMA) — or one for every 33 state residents.
- The country's fleet of recreational marine vehicles uses about **2.1 billion gallons** of gasoline in a year, according to the U.S. Transportation Department.
- Boating in the state has an annual economic impact of about **\$1.34 billion a year** and helps support more than 7,000 jobs in Connecticut alone.
- Nearly **95 percent** of the powerboats sold in the U.S. are produced in the U.S., according to NMMA.

ON THE ISSUES

NATURAL GAS MARKETS

Dannel P. Malloy
Governor

“In promoting a major conversion to natural gas, we are talking about more than cost savings and economic growth; we are also talking about significant air quality and public health benefits.”

INFRASTRUCTURE

John Prete
Avangrid Networks/Connecticut

“We have a commitment to invest and expand our gas distribution system to ensure that our region has energy options that support both economic development and consumer demands. In addition to creating jobs, we’re providing residents with another choice for cleaner, reliable energy that is critical to business development and the homeowners.”
