# API Repair and Remanufacture Program

The API Repair and Remanufacture Program recognizes organizations capable of repairing and remanufacturing products in accordance with an API standard. Organizations licensed under the program are authorized to apply a Mark, the API Repair and Remanufacture Mark, to equipment repaired or remanufactured in conformance with program requirements.

Application of the API Repair and Remanufacture Mark on products constitutes a representation by the licensee that the products have been repaired or remanufactured in conformance with a standard adopted by the program.

Equipment owners can be confident that a certified organization is capable of servicing products according to an API product standard such as API Standard 16AR, *Repair and Remanufacture of Drill-through Equipment* and that the organization has implemented a quality management system in conformance with API Spec Q1.

This new program also provides flexibility for organizations to perform repair and remanufacture activities both at their facility and at field or customer sites, all of which could be subject to an annual audit by API.

Help reduce downtime, improve reliability and encourage sustainability by becoming licensed under API's Repair and Remanufacture Program.
