November 3, 2016

President Barack Obama
The White House
1600 Pennsylvania Avenue, NW
Washington, DC 20500

Dear President Obama:

As representatives of millions of consumers, businesses, workers, and citizens across the United States, the undersigned groups urge your administration to finalize a 2017-2022 Outer Continental Shelf (OCS) Oil and Gas Leasing Program without removing any additional areas. We also urge you not to take any actions that would remove areas from consideration under future offshore leasing programs.

From manufacturing and agriculture to transportation and construction and beyond, domestic offshore oil and natural gas development helps sectors across the entire U.S. economy more affordably and reliably meet their energy needs, to the benefit of all Americans. It powers the nation’s economy by supporting hundreds of thousands of jobs, generating tens of billions of dollars in economic activity, and producing billions of dollars in government revenue. In an increasingly tumultuous world, it also helps safeguard U.S. national security by reducing our exposure to geopolitical uncertainty and decreasing our dependence on foreign sources of energy.

With federal lands and waters estimated to contain nearly 70 percent of the nation’s remaining oil and 26 percent of our natural gas, opportunities to access the country’s estimated 90 billion barrels and 327 trillion cubic feet of undiscovered offshore oil and natural gas will be critical to securing the nation’s long-term economic, energy, and national security.

In that regard, the areas included in the administration’s 2017-2022 Proposed OCS Oil and Gas Leasing Program (Proposed Program) -- the Western and Central Gulf of Mexico, portions of the Eastern Gulf of Mexico, Beaufort Sea, Chukchi Sea, and Cook Inlet -- must remain in the final program without any further removals. In addition, given that the country will continue to rely on oil and gas to meet the majority of our energy needs for decades to come, it is essential that future opportunities to consider leasing in these and other offshore areas of the United States, including the Atlantic, are preserved and not prematurely taken off the table through executive action.

The need for doing so is highlighted by broad and diverse public support and strong bipartisan backing from governors, other state elected officials, and members of Congress representing Alaska and Atlantic and Gulf Coast states that have requested their regions’ inclusion in the offshore leasing program. Such support should be given strong deference.

We understand that environmental impact and safety are of tremendous concern for you, as they are to us. As you and your staff have noted, the country has “slowed our emissions and reduced the pace at which we are emitting carbon dioxide into the atmosphere faster than any other advanced nation,” and in the first six months of 2016, carbon emissions from the domestic energy sector fell to their lowest level in twenty-five years. These developments have occurred at a time when the U.S. catapulted to become the world’s largest producer of oil and natural gas, and in conjunction with unprecedented
steps taken by regulators and industry to further ensure the safe development of offshore energy. Underscored by the Proposed Program’s finding that the removal of offshore lease sales would actually hurt the environment, it is clear that offshore energy development and environmental security can and do successfully coexist.

As you astutely stated in 2015, “I would rather us – with all the safeguards and standards that we have – be producing our oil and gas, rather than importing it, which is bad for our people, but is also potentially purchased from places that have much lower environmental standards than we do.”

We agree, and urge you to protect the nation’s social, economic, energy, and national security by finalizing a 2017-2022 OCS Oil and Gas Leasing Program without removing any additional areas, and not taking action under the Outer Continental Shelf Lands Act or any other authority that would result in the removal of areas from consideration under future offshore leasing programs.

Respectfully,
